Telespar® Sign Support System

Telespar® Sign Support System

The engineered system of integrated parts enables you to mount signs back-to-back and on adjacent sides. It is designed to make adjustment, reinforcement, and splicing fast and easy. By utilizing a square tube, Telespar® exhibits superior wind load capabilities and torsional stability.

Telespar® is primarily designed for signpost usage but is adaptable for identification signage, parking meter posts, barricades, and numerous other applications.

Easy Installation, Rapid Replacement

Telespar® signposts are installed easily by using either a direct embedded method or breakaway anchor system. Installation can be performed by one-man at ground level, eliminating the need for bucket trucks and similar heavy equipment.

Replacement is just as easy, having minimal tool requirements.

Safety

The Telespar® Sign Support System was the first to be used effectively in a yielding breakaway concept for small sign-support systems. They are FHWA approved and in compliance with AASHTO specifications.

- Steel conforms to ASTM A1011 Grade 50;
- Galvanizing meets ASTM A-653
- 7/16" Pre-punched holes
